The format of the text is simple: Understanding of simple trend phases: Accumulation, Participation, and Distribution, and then going through case-by-case, each chart-formation and all their variances, as well as the method by which one may visualize the time-series (line, candlestick etc.) I thought the information here was fine, though pedagogically I believe the book requires at least 2 readings: 1. Reading the whole thing through 2. Referencing relevant sections as you encounter them during your 'demo'/rookie interactions with the market. This is where the audience of the book needs to be specified, this book is definitely more of an introductory text on charting. Here also, there should be a demarcation of 'charting' vis-a-vis the broader universe of methods within technical analysis. This book does not cover stochastic or any other form of oscillator/technical indicators beyond the basic trigger-types related to the moving-average. Thus, it is not a manual on programmatic or "scientific"/"statistical" technical analysis. That being said, for a novice, to begin to understand the underlying motivation of those tools, one needs to at least have a grasp on the 'intuition' of technical analysis, which I think this book provides well. I do take issue with one major thing in the book, it's clearly biased. Perhaps this has become perfunctory in most books on the subject, but the author does not really provide much introduction or commentary on either fundamental analysis or the neo-classical approach to investments (i.e. Sharpe/Fama/French portfolio theory & EMH). Further, the author explicitly provides only the chartist. Therefore, a reader who only uses this book will definitely get only one perspective on investment strategy/tactics. Overall, as a self-published book, this is good as an introduction to the intuition of the technical purview. It's written in a very informal, easy-to-read manner, and I think it will be a great entry point for readers who may want to go further into a more programmatic approach (as well as do simple swing/intra-day trading).
